

DON'T LET PARASITES BECOME PART OF THE FAMILY

Moxiclear[®]
Imidacloprid and Moxidectin

AFFORDABLE PARASITE PROTECTION

**Recommended
by vets**

**Fast acting,
effective &
comprehensive
parasite protection**

**Easy to use,
water-resistant
monthly spot on**

**Moxiclear can be
used from 9 weeks in
kittens and 7 weeks
in puppies.**

**Affordable year-
round protection
solution**

Fast acting to kill, treat and control parasites

DOGS

Adult and larval fleas	✓
Reduces flea allergy dermatitis	✓
Prevents heartworm	✓
Adult, immature and larval roundworms	✓
Adult, immature and larval hookworms	✓
Whipworm	✓
Ear mites	✓
Sarcoptic mange	✓
Lice	✓

CATS

Adult and larval fleas	✓
Reduces flea allergy dermatitis	✓
Prevents heartworm	✓
Adult, immature and larval roundworms	✓
Adult, immature and larval hookworms	✓
Lungworm	✓
Ear mites	✓

MONTHLY TOPICAL APPLICATION.

Do not give orally.

If tick or tapeworm prevention is required, Moxiclear can be used in conjunction with an appropriate treatment.

Monthly application:

For dogs less than 25kg, Moxiclear is applied between the shoulder blades.

An instructional video is available at:
<https://youtu.be/QLjNAOsNMb0>

For dogs greater than 25kg, Moxiclear is applied by dividing the dose between the shoulder blades, on the midline of the back between the hips, and at one point in between.

Monthly application:

For cats, Moxiclear is applied at the back of the neck.

MOXICLEAR IS THE AFFORDABLE, MONTHLY TOPICAL COMPREHENSIVE PARASITE TREATMENT

- ✓ Treats and prevents fleas in cats and dogs.
- ✓ Kills flea larvae in the pet's surroundings.
- ✓ Prevents heartworm in cats and dogs.
- ✓ Controls roundworm, hookworm and whipworm in dogs.
- ✓ Controls roundworm and hookworm in cats.
- ✓ Treats and controls lungworm in cats.
- ✓ Treats and controls ear mites in cats and dogs.
- ✓ Treats and controls sarcoptic mange in dogs.
- ✓ Controls lice in dogs.

FLEA CONTROL AND PREVENTION

MOXICLEAR has been shown to kill adult and larval fleas within 20 minutes of contact by absorption via the flea intersegmental membranes. Stop fleas from feeding in 3-5 minutes. Fleas are not required to bite the animal to receive a lethal dose.

The successive feeding activity of fleas on pets may elicit a hypersensitivity skin disorder known as flea allergy dermatitis (FAD). Treatment of pets with MOXICLEAR rapidly kills fleas and reduces the incidence of this condition.

HEARTWORM PREVENTION

Treatment with MOXICLEAR should start one month before the first exposure to mosquitoes. MOXICLEAR must be applied at one month intervals during the time of the year when mosquitoes (which carry and transmit the heartworm larvae) are present. In many areas of Australia continuous, year-round heartworm prevention is recommended.

To establish a routine, it is recommended that the same day or date be used each month to administer MOXICLEAR. When replacing another heartworm preventive product, the first treatment with MOXICLEAR must be given within one month of the last dose of the previous product.

WORM CONTROL

MOXICLEAR treats and controls the major gastrointestinal nematodes of dogs and cats but does not control tapeworms. In order to control these worms use a specific agent.

Pets can become reinfested with worms but regular use of MOXICLEAR will remove them.

TREATMENT AND CONTROL OF LUNGWORM

For the treatment of lungworm (*Aelurostrongylus abstrusus*), MOXICLEAR is highly efficacious as a single dose. Monthly application of MOXICLEAR will control any subsequent lungworm infections.

TREATMENT AND CONTROL OF SARCOPTIC MANGE IN DOGS

MOXICLEAR has been shown to have good efficacy against sarcoptic mites (*Sarcoptes scabiei*) after a single dose. A second dose of MOXICLEAR a month later will result in continued improvement of the clinical signs associated with sarcoptic mange.

Monthly application of MOXICLEAR will control any subsequent sarcoptic mite infestation.

TREATMENT AND CONTROL OF EAR MITES

For the elimination of ear mites (*Otodectes cynotis*), MOXICLEAR should be applied once and is highly efficacious as a single dose. Monthly application of MOXICLEAR will control any subsequent ear mite infestation.

To maximise efficacy thorough cleaning of the ear canal is recommended with a product that is registered for that purpose or as directed by a veterinarian.

LICE CONTROL IN DOGS

A single treatment of MOXICLEAR will control lice on dogs for up to 6 weeks.

Imidacloprid and Moxidectin

GENERIC MEDICATIONS

A generic product contains the same active ingredients at similar concentrations as the pioneer product. You should expect similar levels of efficacy and safety to the pioneer product. Moxiclear is a generic of a market leading product that provides comprehensive parasite treatment and prevention.
